

# Use APEX Shortcuts for your Clear Item Button or Link

👤 JORGE RIMBLAS - POSTED ON 📅 JUNE 10, 2020 - 📁 POSTED IN APEX, HACK, JAVASCRIPT, ORACLE

The screenshot shows a web application interface with a breadcrumb 'Home \'. Below it is the title 'Clear Item Button/Link'. There are two identical form sections. Each section has an 'Employee' field with a dropdown menu showing '- Choose -' and a small 'X' button to its right. Below the 'Employee' field is a 'Search' text input field with a small 'X' button to its right. At the bottom of each form section is a 'Clear' button.

You probably know how to add a button or link to clear the value of an item. You may have seen the button on [apex.world](#) when you search for a plug-in, for example.

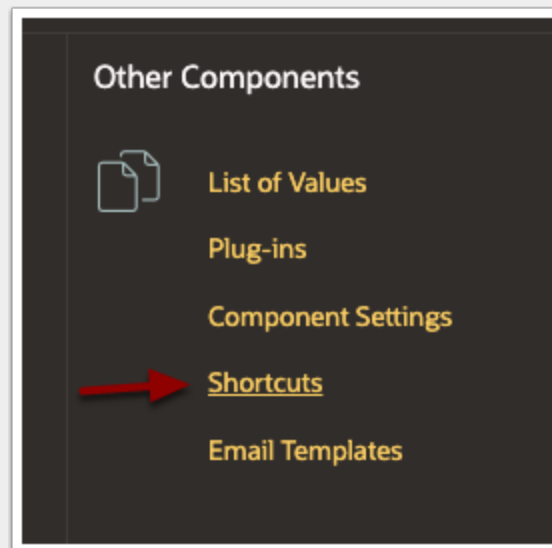

*apex.world plugin search*

You can use a Dynamic Action that executes a “Set Value” or a fairly straight-forward code like this:

```
<a href="javascript:$s("P1_SEARCH", "")">Clear</a>
```

What I like to do is define APEX Shortcuts. You find them under Shared Components > Other Components > Shortcuts

There are two Shortcuts I usually create and use them depending on how well they fit:

- A button CLEAR\_BUTTON
- A text link CLEAR\_LINK

## Create Shortcut

✓

●

### Shortcut Attributes

Shortcuts are a repository of shared static or dynamic HTML. By using a shortcut, you can avoid recoding the same HTML or PL/SQL function multiple times. Creating shortcuts on page item labels and page item post element text attributes can include the following substitution strings: #CURRENT\_FORM\_ELEMENT#, #CURRENT\_ITEM\_ID#, #CURRENT\_ITEM\_NAME#.

\*

Name

CLEAR\_LINK

?

\*

Type

PL/SQL Function Body

▼

?

Shortcut

```
return q'!<a href="javascript:$s('#CURRENT_ITEM_NAME#','');"
class="clearLink a-Button a-Button--popupLOV">!'
|| apex_lang.lang('Clear') || '</a>';
```

?

Error Text

?

<

Cancel

Create

## Create Shortcut

### Shortcut Attributes

Shortcuts are a repository of shared static or dynamic HTML. By using a shortcut, you can avoid recoding the same HTML or PL/SQL function multiple times. Creating shortcuts on page item labels and page item post element text attributes can include the following substitution strings: #CURRENT\_FORM\_ELEMENT#, #CURRENT\_ITEM\_ID#, #CURRENT\_ITEM\_NAME#.

\* Name

CLEAR\_BUTTON

\* Type

PL/SQL Function Body

Shortcut

```
return '<a class="a-Button a-Button--popupLOV lov-clear" aria-label="'  
|| apex_lang.lang('Clear') || '" title="' || apex_lang.lang('Clear') ||  
'"' || q'! href="javascript:$s('#CURRENT_ITEM_NAME#','');">!  
|| '<span class="fa fa-close"></span>  
|| '</a>';
```

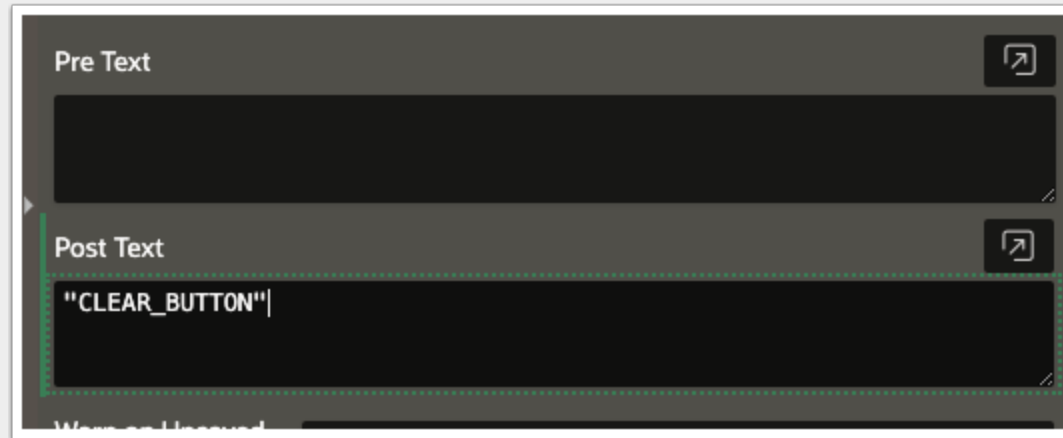

Error Text

Cancel

Create

Once these Shortcuts are defined I can simply type "CLEAR\_BUTTON" or "CLEAR\_LINK" in the "Post Text" field of an Item.

A screenshot of a form with two text input fields. The top field is labeled 'Pre Text' and is empty. The bottom field is labeled 'Post Text' and contains the text 'CLEAR\_BUTTON'. Both fields have a small icon in the top right corner. The 'Post Text' field is highlighted with a green dashed border.

*Post Text with Shortcut*

View the [Demo Here](#).

Here is the end result:

## Clear Item Button/Link

Employee - Choose - X

Search X

Employee - Choose - Clear

Search Clear

```
return '<a class="a-Button a-Button--popupLOV lov-clear" aria-label="" || apex_lang.lang('Clear') || ' '
title="" || apex_lang.lang('Clear') || q'!" href="javascript:$s('#CURRENT_ITEM_NAME#','');">!'
|| '<span class="fa fa-close"></span>'
|| '</a>';
```

```
return q'!<a href="javascript:$s('#CURRENT_ITEM_NAME#','');" class="clearLink a-Button a-Button--
popupLOV">!'
|| apex_lang.lang('Clear') || '</a>';
```

**Final Note:** I may be using APEX 20.1 for the screenshots, however, I've been using this feature since APEX 4.2!!!

**PS.** Thanks to [Ronny Weiss](#) correcting a typo and for reminding me that this solution doesn't look as great with Floating Labels. What I suggest is to remove the `a-Button` & `a-Button--popupLOV` classes and instead turn on the "Display as Block" Template Option. The end result can be seen below. For the icon option, you can do something similar, but you may want a little more styling.

Template Options

Common

General

Use Template Defaults

Stretch Form Item

Size

Default

Advanced

Item Pre Text

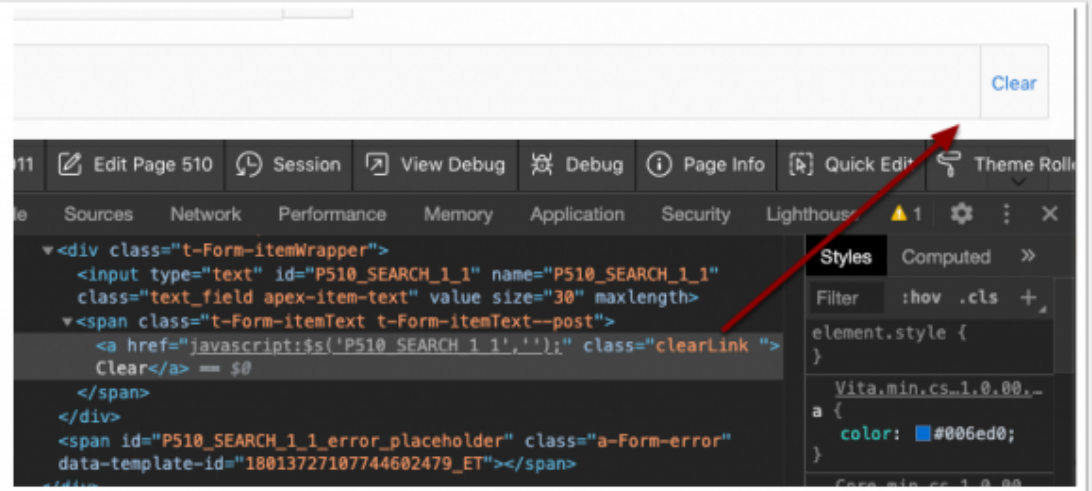

Default

Item Post Text

Display as Block

Top Margin

Default

## 10 Comments on “Use APEX Shortcuts for your Clear Item Button or Link”

June 11, 2020 at 7:44 am

Hi Jorge,

Great post. I immediate set it to work for me!

One question: Why did you choose the Shortcut to be of type PL/SQL Function Body? While it seems to me it's just plain text (with a substitution)

Hope to hear from you.

Hi Dick, very good observation, I'm now remembering that the shortcuts may have started life as plain or HTML shortcuts, however, once I had to use them in a translated, I switched to PL/SQL so I could use apex\_lang.lang. However, if you want them translated you could also use the JS call (but that adds the JS string to every request). Thank you, I appreciate the comment

Having issues getting the CLEAR\_BUTTON to work in APEX 20.2 Cloudy 24 Theme. It wont render the check box. Yet I can get the CLEAR\_LINK to work.  
Any idea's
